CRN 5-15 A-FGJ-H-E-HQQE		
Note! Pro Product No.: 96531673	oduct picture may differ from ac	ual product
Vertical, multistage centrifugal pump with inlu- with the liquid are in high-grade stainless ste access and service. Power transmission is v flanges.	eel. A cartridge shaft seal e	nsures high reliability, safe handling, and e
The pump is fitted with a 3-phase, fan-cooled	d asynchronous motor.	
Further product details Steel, cast iron and aluminium components I (CED) process.	have an epoxy-based coat	ng made in a cathodic electro-deposition
CED is a high-quality dip-painting process w particles as a thin, well-controlled layer on th An integral part of the process is a pretreatm	ne surface.	and the products ensures deposition of pair
 The entire process consists of these elemen 1) Alkaline-based cleaning. 2) Zinc phosphating. 3) Cathodic electro-deposition. 4) Curing to a dry film thickness 18-22 my The colour code for the finished product is N 	nts: m.	
Pump A standard split coupling connects the pump of two coupling guards.		osed in the pump head/motor stool by mea
China Color China China Color China		
The pump head and flange for motor mounti component (stainless steel). The pump head	ing is made in one piece (c d has a combined 1/2" prim	ast iron). The pump head cover is a separa ing plug and vent screw.

Qty. | Description

1

Due to the balancing, this seal type is suitable for high-pressure applications.

The cartridge construction also protects the pump shaft from possible wear from a dynamic O-ring between pump shaft and shaft seal.

Date:

Seal faces:

- Rotating seal ring material: silicon carbide (SiC)
- Stationary seat material: silicon carbide (SiC)

This material pairing is used where higher corrosion resistance is required. The high hardness of this material pairing offers good resistance against abrasive particles.

Secondary seal material: EPDM (ethylene-propylene rubber)

EPDM has excellent resistance to hot water. EPDM is not suitable for mineral oils.

The shaft seal is screwed into the pump head.

The chambers and impellers are made of stainless-steel sheet. The chambers are provided with a PTFE neck ring offering improved sealing and high efficiency. The impellers have smooth surfaces, and the shape of the blades ensure a high efficiency.

The pump has a stainless-steel base mounted on a seperate base plate.

This base and base plate are kept in position by the tension of the staybolts which hold the pump together.

The outlet side of the base has a combined drain plug and bypass valve.

The pump is secured to the foundation by four bolts through the base plate.

The flanges and base are cast in one piece and prepared for connection by means of DIN, ANSI or JIS.

Motor

The motor is a totally enclosed, fan-cooled motor with principal dimensions to IEC and DIN standards. The motor is flange-mounted with tapped-hole flange (FT).

Motor-mounting designation in accordance with IEC 60034-7: IM B 14 (Code I) / IM 3601 (Code II). Electrical tolerances comply with IEC 60034.

The motor efficiency is classified as IE3 in accordance with IEC 60034-30-1.

The motor does not incorporate motor protection and must be connected to a motor-protective circuit breaker which can be manually reset. The motor-protective circuit breaker must be set according to the rated current of the motor (I1/1).

The motor can be connected to a variable speed drive for adjustment of pump performance to any duty point. Grundfos CUE offers a range of variable speed drives. Please find more information in Grundfos Product Center.
