ty.	Description
1	TPED 65-720/2 S-A-F-A-BQQE-QX1
	Note! Product picture may differ from actual product
	Product No.: 96945793
	Single-stage, close-coupled, volute twin-head pump with in-line suction and discharge ports of identical diameter. The twin-head pump is designed with two parallel power-heads.
	The pump is of the top-pull-out design, i.e. the power head (motor, pump head and impeller) can be removed for maintenance or service while the pump housing remains in the pipework.
	Each power head is fitted with an unbalanced rubber bellows seal. The shaft seal is according to EN 12756. Pipework connection is via PN 16 DIN flanges (EN 1092-2 and ISO 7005-2).
	Each power head is fitted with a fan-cooled asynchronous motor of indentical size. The motor includes a frequency converter and PI controller in the motor terminal box. This enables continuously variable control of the motor speed, which again enables adaptation of the performance to a given requirement.
	The pump is fitted with a differential pressure sensor. The pump is suitable for applications requiring pressure control. The pump is fitted with a differential-pressure transmitter registering the differential pressure across the pump and enabling constant pressure or proportional-pressure control of the pump.
	A cable ensures communication between the two power heads. The selector switch in the terminal boxes enables changeover between the operating modes "alternating operation" and "standby operation".
	The product's minimum efficiency index (MEI) is greater or equal to 0.70. This is by the Commission Regulation (EU) considered as an indicative benchmark for best-performing water pump available on the market as from 1 January 2013.
	A control panel enables setting of required setpoint as well as setting of pump to "Min." or "Max." operation or to "Stop".
	The control panel has indicator lights for "Operation" and "Fault". Communication with the pump is possible by means of the Grundfos GO Remote (accessory). The remote control enables further settings as well as reading out of a number of parameters such as "Actual value", "Speed", "Power input" and total "Power consumption".
	Cast-iron parts have an epoxy-based coating made in a cathodic electro-deposition (CED) process. CED is a high-quality dip-painting process where an electrical field around the products ensures deposition of paint particles as a thin, well-controlled layer on the surface.
	Pump
	1: Pump housing

	Description			
	2: Impeller			
	3: Stub shaft			
	4: Pump head/motor stool			
	5: Wear rings			
	The twin-head pump is designed with two parallel power-he is opened by the flow of the pumped liquid and prevents ba	ckflow of lic	quid into the idle pump head.	
	The pump housing is provided with a replaceable brass neo outlet side of the impeller to the inlet side.	ck ring to re	duce the amount of liquid running from the	
	The impeller is secured to the shaft with a nut.			
The pump is fitted with an unbalanced rubber bellows seal with torque transmission across the spring and arc bellows. Due to the bellows, the seal does not wear the shaft, and the axial movement is not prevented by de on the shaft.				
	Seal faces:			
	 Rotating seal ring material: silicon carbide (SiC) 			
	 Stationary seat material: silicon carbide (SiC) 			
	This material pairing is used where higher corrosion resista offers good resistance against abrasive particles.	ince is requ	ired. The high hardness of this material pair	
	Secondary seal material: EPDM (ethylene-propylene rubbe	er)		
	EPDM has excellent resistance to hot water. EPDM is not s	suitable for i	mineral oils.	
	A circulation of liquid through the duct of the air vent screw			
	The pump housing has four Rp 1/8 tappings for mounting on housing if the twin-head pump is to be installed in a horizor	of automatic ntal pipeline	air vents. Fit an air vent to the upper pump with horizontal pump shaft.	
	The flanges have tappings for mounting of pressure gauge	\$		
	The motor stool forms connection between the pump housi screw for venting of the pump housing and the shaft seal cl housing is an O-ring.	ng and the	motor, and is equipped with a manual air ve e sealing between motor stool and pump	
	The central part of the motor stool is provided with guards f shaft is fastened directly on the motor shaft with key and se	or protectio	n against the shaft and coupling. The pump	
	The pump is mounted with a base plate.			
	Motor			
	The motor is a totally enclosed, fan-cooled motor with princ tolerances comply with IEC 60034.	ipal dimens	sions to IEC and DIN standards. Electrical	
	The motor is flange-mounted with free-hole flange (FF).			

The motor requires no external motor protection. The motor control unit incorporates protection against slow- and quick-rising temperatures, e.g. constant overload and stalled conditions.

The terminal box holds terminals for these connections:

- pump start/stop input (potential-free contact)
- remote setpoint setting via analog signal, 0-10 V, 0(4)-20 mA
- 10 V voltage supply for setpoint potentiometer, Imax = 5 mA
- one analog sensor input, 0-10 V, 0(4)-20 mA; the factory-fitted pressure sensor is connected to this input
- 24 V voltage supply for sensor, Imax = 40 mA •
- one digital input •
- two potential-free fault signal relays with changeover contact, reporting "Fault", "Operation" or "Ready" •
- cable for communication between the two power heads •
- selector switch for alternating operation and standby operation •
- RS-485 GENIbus connection •
- interface for Grundfos CIU fieldbus module. •
