TP 50-630/2 A-F-A-BQQE-OX1

Note! Product picture may differ from actual product

Product No.: On request

Single-stage, close-coupled, volute pump with in-line suction and discharge ports of identical diameter. The pump is of the top-pull-out design, i.e. the power head (motor, pump head and impeller) can be removed for maintenance or service while the pump housing remains in the pipework.

The pump is fitted with an unbalanced rubber bellows seal.

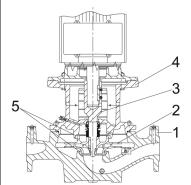

The shaft seal is according to EN 12756. Pipework connection is via PN 16 DIN flanges (EN 1092-2 and ISO 7005-2).

The pump is fitted with a fan-cooled asynchronous motor.

The product's minimum efficiency index (MEI) is greater or equal to 0.70. This is by the Commission Regulation (EU) considered as an indicative benchmark for best-performing water pump available on the market as from 1 January 2013

Cast-iron parts have an epoxy-based coating made in a cathodic electro-deposition (CED) process. CED is a high-quality dip-painting process where an electrical field around the products ensures deposition of paint particles as a thin, well-controlled layer on the surface.

Pump

- 1: Pump housing
- 2: Impeller
- 3: Stub shaft
- 4: Pump head/motor stool
- 5: Wear rings

The pump housing is provided with a replaceable brass neck ring to reduce the amount of liquid running from the outlet side of the impeller to the inlet side.

The impeller is secured to the shaft with a nut.

The pump is fitted with an unbalanced rubber bellows seal with torque transmission across the spring and around the bellows. Due to the bellows, the seal does not wear the shaft, and the axial movement is not prevented by deposits on the shaft.

Seal faces:

- Rotating seal ring material: silicon carbide (SiC)
- Stationary seat material: silicon carbide (SiC)

This material pairing is used where higher corrosion resistance is required. The high hardness of this material pairing offers good resistance against abrasive particles.

Description					
Secondary seal material: EPDM (ethylene-propylene rubber)					
EPDM has excellent resistance to hot water. EPDM is not suitable for mineral oils.					
A circulation of liquid through the duct of the air vent screw ensures lubrication and cooling of the shaft seal.					
The flanges have tappings for mounting of pressure gauges.					
The motor stool forms connection screw for venting of the pump he housing is an O-ring.	on between the pump housing and the motor, and is equipped with a manual air ver ousing and the shaft seal chamber. The sealing between motor stool and pump				
The central part of the motor sto	ool is provided with guards for protection against the shaft and coupling. The pump motor shaft with key and set screws.				
The pump is mounted with a bas	se plate.				
Motor					
The motor is a totally enclosed, fan-cooled motor with principal dimensions to IEC and DIN standards. Electrical					
tolerances comply with IEC 60034.					
The motor is flange-mounted wi Motor-mounting designation in a	th free-hole flange (FF). accordance with IEC 60034-7: IM B 5, IM V 1 (Code I) / IM 3001, IM 3011 (Code II).				
•	d as IE3 in accordance with IEC 60034-30-1.				
The motor has thermistors (PTC reacts to both slow- and quick-ri	c sensors) in the windings in accordance with DIN 44081/DIN 44082. The protection ising temperatures, e.g. constant overload and stalled conditions.				
Thermal switches must be conn cannot cause accidents. The moregulations.	ected to an external control circuit in a way which ensures that the automatic reset otors must be connected to a motor-protective circuit breaker according to local				
The motor can be connected to	a variable speed drive for adjustment of pump performance to any duty point. variable speed drives. Please find more information in Grundfos Product Center.
