	Note! Product picture may differ from actual product			
	Product No.: 98854358			
	Non-self-priming, single-stage, centrifugal pump designed according to ISO 5199 with dimensions and rated			
	performance according to EN 733. Flanges are PN 10 with dimensions according to EN 1092-2. The pump has an			
	axial suction port, a radial discharge port and horizontal shaft. It is of the back pull-out design enabling removal of the coupling, bearing bracket and impeller without disturbing the motor, pump housing or pipework.			
	The unbalanced rubber bellows seal is according to DIN EN 12756.			
	The pump is fitted with a foot-mounted, fan-cooled asynchronous motor. Pump and motor are mounted on a common			
	base frame.			
	Pump and motor are mounted on a common steel base frame in accordance with ISO 3661.			
	The back pull-out design together with a spacer coupling makes it possible to service the pump without dismantling			
	the pump housing and motor from the base frame.			
	This saves realignment of pump and motor after service. 1) Remove coupling.			
	2) Remove the bolts in the bearing bracket support foot.			
	3) Remove the bearing bracket from the pump housing.			
	Pump The pump housing has both a priming and a drain hole closed by plugs. The impeller is a closed impeller with			
	double-curved blades with smooth surfaces. The impeller is statically balanced according to ISO 1940-1 class G6.3 and hydraulically balanced to compensate for axial thrust.			
	Wear rings used in pump housing and for impeller are made of bronze/brass. The pump is fitted with an unbalanced rubber bellows seal with torque transmission across the spring and around the			
	bellows. Due to the bellows, the seal does not wear the shaft, and the axial movement is not prevented by deposits			
	on the shaft.			
	{IMG Filename: GRALON_NB-NK-G_SHAFTSEAL_Bxxx.gif }			
	Seal faces:			
	Rotating seal ring material: silicon carbide (SiC) Stationary seat material: silicon carbide (SiC)			
 Stationary seat material: silicon carbide (SiC) This material pairing is used where higher corrosion resistance is required. The high hardness of the 				
This material pairing is used where higher corrosion resistance is required. The high hardness of this ma offers good resistance against abrasive particles.				
	Secondary seal material: EPDM (ethylene-propylene rubber)			
	EPDM has excellent resistance to hot water. EPDM is not suitable for mineral oils.			
	The shaft is made of stainless steel and has a diameter of 48 mm where the coupling is mounted.			
	The pump uses a spacer coupling between the pump and motor shaft.

Motor

The motor is a totally enclosed, fan-cooled motor with principal dimensions to IEC and DIN standards. Electrical tolerances comply with IEC 60034.

The motor efficiency is classified as IE3 in accordance with IEC 60034-30-1.

The motor has thermistors (PTC sensors) in the windings in accordance with DIN 44081/DIN 44082. The protection reacts to both slow- and quick-rising temperatures, e.g. constant overload and stalled conditions.

Thermal switches must be connected to an external control circuit in a way which ensures that the automatic reset cannot cause accidents. The motors must be connected to a motor-protective circuit breaker according to local regulations.

A variable speed drive makes adjustment of pump performance to any duty point possible. If the motor is to be connected to a variable speed drive, the pump must be ordered with an electrically insulated motor bearing.

Further product details

Cast-iron parts have an epoxy-based coating made in a cathodic electro-deposition (CED) process. CED is a high-quality dip-painting process where an electrical field around the products ensures deposition of paint particles as a thin, well-controlled layer on the surface.
