Description	
NKE 32-250/206 AA2F2AESBQQEFWA	
Note! Product picture may differ from	actual product
Product No.: On request	
Non-self-priming, single-stage, centrifugal pump designed according performance according to EN 733. Flanges are PN 16 with dimension axial suction port, a radial discharge port and horizontal shaft. It is o coupling, bearing bracket and impeller without disturbing the motor,	ons according to EN 1092-2. The pump has a f the back pull-out design enabling removal of
The unbalanced rubber bellows seal is according to DIN EN 12756.	
The pump is fitted with a foot-mounted, fan-cooled, permanent-mag mounted on a common base frame.	net synchronous motor. Pump and motor are
The motor includes a frequency converter and PI controller in the m variable control of the motor speed, which again enables adaptation	otor terminal box. This enables continuously of the performance to a given requirement.
The product's minimum efficiency index (MEI) is greater or equal to considered as an indicative benchmark for best-performing water pt 2013.	0.70. This is by the Commission Regulation (
An external sensor can be connected if controlled pump operation is temperature control.	s required for flow, differential pressure or
The operating panel on the motor terminal box features a four-inch indicator.	TFT display, push-buttons and the Grundfos I
The display gives an intuitive and user-friendly interface to all function The push-buttons are used to navigate through the menu structure to enable setting of required setpoint as well as setting of pump to "Min	to access pump and performance data on site
The Grundfos Eye indicator on the operating panel provides visual i "Power on": Motor is running (rotating green indicator lights)	
 "Warning": Motor is still running (rotating yellow indicator ligh lights) 	ts) or has stopped (permanently yellow indica
 "Alarm": Motor has stopped (flashing red indicator lights). Communication with the pump is also possible by means of Grundfor enables further settings as well as reading out of a number of paran input" and total "Power consumption". 	os GO Remote (accessory). The remote contr neters such as "Actual value", "Speed", "Powe
Pump and motor are mounted on a common steel base frame in acc The back pull-out design together with a spacer coupling makes it p the pump housing and motor from the base frame.	
This saves realignment of pump and motor after service. 1) Remove coupling.	
2) Remove the bolts in the bearing bracket support foot.3) Remove the bearing bracket from the pump housing.	
Pump

Qty. | Description

The pump housing has both a priming and a drain hole closed by plugs. The impeller is a closed impeller with double-curved blades with smooth surfaces. The impeller is statically balanced according to ISO 1940-1 class G6.3 and hydraulically balanced to compensate for axial thrust.

Date:

Wear rings used in pump housing and for impeller are made of bronze/brass.

The pump is fitted with an unbalanced rubber bellows seal with torque transmission across the spring and around the bellows. Due to the bellows, the seal does not wear the shaft, and the axial movement is not prevented by deposits on the shaft.

{IMG Filename: GRALON_NB-NK-G_SHAFTSEAL_Bxxx.gif }

Seal faces:

- Rotating seal ring material: silicon carbide (SiC)
- Stationary seat material: silicon carbide (SiC)

This material pairing is used where higher corrosion resistance is required. The high hardness of this material pairing offers good resistance against abrasive particles.

Secondary seal material: EPDM (ethylene-propylene rubber)

EPDM has excellent resistance to hot water. EPDM is not suitable for mineral oils.

The shaft is made of stainless steel and has a diameter of 24 mm where the coupling is mounted.

The pump uses a spacer coupling between the pump and motor shaft.

Motor

The motor is a totally enclosed, fan-cooled motor with principal dimensions to IEC and DIN standards. Electrical tolerances comply with IEC 60034.

The motor efficiency is classified as IE5 in accordance with IEC 60034-30-2.

The motor requires no external motor protection. The motor control unit incorporates protection against slow- and quick-rising temperatures, e.g. constant overload and stalled conditions.

The terminal box holds terminals for these connections:

- one dedicated digital input

- two analog inputs, 0(4)-20 mA, 0-5 V, 0-10 V, 0.5 3.5 V
- 5 V voltage supply to potentiometer and sensor
- one configurable digital input or open-collector output
- Grundfos Digital Sensor input and output
- 24 V voltage supply for sensors
- two signal-relay outputs (potential-free contacts)
- GENIbus connection
- interface for Grundfos CIM fieldbus module.

Further product details

Cast-iron parts have an epoxy-based coating made in a cathodic electro-deposition (CED) process. CED is a high-quality dip-painting process where an electrical field around the products ensures deposition of paint particles as a thin, well-controlled layer on the surface.
