Qty.	Description						
1	CRNE 32-1 A-F-A-E-HQQE						
	Product No.: 99071972						
	Vertical, multistage centrifugal pump with inlet and outlet with the liquid are in high-grade stainless steel. A cartrid access and service. Power transmission is via a rigid spl	ge shaft seal ens	sures high reliability, safe handling, and easy				
	The pump is fitted with a 3-phase, fan-cooled, permanent-magnet, synchronous motor. The motor efficiency is classified as IE5 in accordance with IEC 60034-30-2. The motor includes a frequency converter and PI controller in the motor terminal box. This enables continuously variable control of the motor speed, which again enables adaptation of the performance to a given requirement. An operating panel on the motor terminal box enables setting of required setpoint as well as setting of pump to "Min."						
	or "Max." operation or to "Stop". The Grundfos Eye indicator on the operating panel provides visual indication of pump status: "Power on": Motor is running (rotating green indicator lights) or not running (permanently green indicator lights) 						
	"Warning": Motor is still running (rotating yellow ir	c ,					
	 lights) "Alarm": Motor has stopped (flashing red indicato 						
	Communication with the pump is possible by means of Grundfos GO Remote (accessory). The remote control enables further settings as well as reading out of a number of parameters such as "Actual value", "Speed", "Power input" and total "Power consumption".						
	The terminal box has a number of inputs and outputs en many inputs and outputs are required:	abling the motor	to be used in advanced applications where				
	 two dedicated digital inputs 						
	• three analog inputs, 0(4)-20 mA, 0-5 V, 0-10 V, 0	.5 - 3.5 V					
	 5 V voltage supply to potentiometer and sensor one analog output, 0-10 V, 0(4)-20 mA 						
	 two configurable digital inputs or open-collector o 	utouts					
	 two Pt100/Pt1000 inputs 	aiputo					
	LiqTec, dry-running protection sensor input						
	 Grundfos Digital Sensor input and output 						
	 24 V voltage supply for sensors 						
	two signal-relay outputs (potential-free contacts)						
	 GENIbus connection interface for Grundfos CIM fieldbus module. 						
	Further product details						
	An external sensor can be connected if controlled pump	operation based	on for example flow, differential pressure or				
	temperature is required.						
	An operating panel on the motor terminal box enables se or "Max." operation or to "Stop". The Grundfos Eye indic pump status:	etting of required ator on the operation	setpoint as well as setting of pump to "Min." ating panel provides visual indication of				
	"Power on": Motor is running (rotating green indic	ator lights) or no	t running (permanently green indicator lights)				
	 "Warning": Motor is still running (rotating yellow in lights) 	ndicator lights) o	r has stopped (permanently yellow indicator				
	"Alarm": Motor has stopped (flashing red indicato	r lights).

1

Communication with the pump is possible by means of Grundfos GO Remote (accessory). The remote control enables further settings as well as reading out of a number of parameters such as "Actual value", "Speed", "Power input" and total "Power consumption".

Date:

Steel, cast iron and aluminium components have an epoxy-based coating made in a cathodic electro-deposition (CED) process.

CED is a high-quality dip-painting process where an electrical field around the products ensures deposition of paint particles as a thin, well-controlled layer on the surface.

An integral part of the process is a pretreatment.

The entire process consists of these elements:

1) Alkaline-based cleaning.

2) Zinc phosphating.

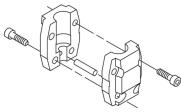

Cathodic electro-deposition.

4) Curing to a dry film thickness 18-22 my m.

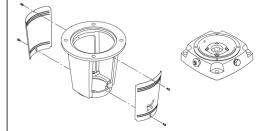

The colour code for the finished product is NCS 9000/RAL 9005.

Pump

A standard split coupling connects the pump and motor shaft. It is enclosed in the pump head/motor stool by means of two coupling guards.

The motor stool connects the pump head and motor. The pump head has a combined 1/2" priming plug and vent screw.

The pump is fitted with a balanced O-ring seal unit with a rigid torque-transmission system.

This seal type is assembled in a cartridge unit which makes replacement safe and easy.

Due to the balancing, this seal type is suitable for high-pressure applications.

The cartridge construction also protects the pump shaft from possible wear from a dynamic O-ring between pump shaft and shaft seal.

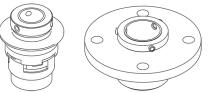

Seal faces:

- Rotating seal ring material: silicon carbide (SiC)
- Stationary seat material: silicon carbide (SiC)

This material pairing is used where higher corrosion resistance is required. The high hardness of this material pairing offers good resistance against abrasive particles.

Secondary seal material: EPDM (ethylene-propylene rubber)

EPDM has excellent resistance to hot water. EPDM is not suitable for mineral oils.

The shaft seal is retained in the pump head by a cover and screws. It can be replaced without removing the motor.

1

The chambers and impellers are made of stainless-steel sheet. The chambers are provided with a PTFE neck ring offering improved sealing and high efficiency. The impellers have smooth surfaces, and the shape of the blades ensure a high efficiency.

Date:

The pump has a stainless-steel base mounted on a separate base plate. The base and base plate are kept in position by the tension of the staybolts which hold the pump together. Both the inlet and the outlet side of the base have two pressure gauge tappings. The pump is secured to the foundation by four bolts through the base plate. The flanges are fastened to the base by means of locking rings.

Motor

The motor is a totally enclosed, fan-cooled motor with principal dimensions to IEC and DIN standards. The motor is flange-mounted with tapped-hole flange (FT).

Motor-mounting designation in accordance with IEC 60034-7: IM B 14 (Code I) / IM 3601 (Code II).

Electrical tolerances comply with IEC 60034.

The motor efficiency is classified as IE5 in accordance with IEC 60034-30-2.

The motor requires no external motor protection. The motor control unit incorporates protection against slow- and quick-rising temperatures, e.g. constant overload and stalled conditions.

The terminal box has a number of inputs and outputs enabling the motor to be used in advanced applications where many inputs and outputs are required:

- · two dedicated digital inputs
- three analog inputs, 0(4)-20 mA, 0-5 V, 0-10 V, 0.5 3.5 V
- 5 V voltage supply to potentiometer and sensor
- one analog output, 0-10 V, 0(4)-20 mA
- · two configurable digital inputs or open-collector outputs
- two Pt100/Pt1000 inputs
- LiqTec, dry-running protection sensor input
- · Grundfos Digital Sensor input and output
- 24 V voltage supply for sensors
- two signal-relay outputs (potential-free contacts)
- GENIbus connection
- interface for Grundfos CIM fieldbus module.
