	Single-stage, close-coupled, volute pump with in-line suction and discharge ports of The pump is of the top-pull-out design, i.e. the power head (motor, pump head and maintenance or service while the pump housing remains in the pipework.	
	The pump is fitted with an unbalanced rubber bellows seal. The shaft seal is according to EN 12756. Pipework connection is via PN 16 DIN flar	nges (EN 1092-2 and ISO 7005-2)
	The pump is fitted with a fan-cooled, permanent-magnet synchronous motor. The min accordance with IEC 60034-30-2.	otor efficiency is classified as IE5
	The motor includes a frequency converter and PI controller in the motor terminal bo variable control of the motor speed, which again enables adaptation of the performance.	x. This enables continuously ance to a given requirement.
	The pump is fitted with a differential pressure sensor. The pump is suitable for applications requiring pressure control. The pump is fitted transmitter registering the differential pressure across the pump and enabling const proportional-pressure control of the pump.	with a differential-pressure ant pressure or
	A control panel enables setting of required setpoint as well as setting of pump to "M "Stop".	in." or "Max." operation or to
	The control panel has indicator lights for "Operation" and "Fault". Communication with the pump is possible by means of the Grundfos GO Remote (a The remote control enables further settings as well as reading out of a number of pa "Speed", "Power input" and total "Power consumption".	
	Cast-iron parts have an epoxy-based coating made in a cathodic electro-deposition high-quality dip-painting process where an electrical field around the products ensure a thin, well-controlled layer on the surface.	(CED) process, CED is a

	 Pump housing Impeller Stub shaft Pump head/motor stool Wear rings 	

15/06/2022

Qty. | Description

The pump housing is provided with a replaceable brass neck ring to reduce the amount of liquid running from the outlet side of the impeller to the inlet side.

The impeller is secured to the shaft with a nut.

The pump is fitted with an unbalanced rubber bellows seal with torque transmission across the spring and around the bellows. Due to the bellows, the seal does not wear the shaft, and the axial movement is not prevented by deposits on the shaft.

Seal faces:

- Rotating seal ring material: silicon carbide (SiC)
- Stationary seat material: silicon carbide (SiC)

This material pairing is used where higher corrosion resistance is required. The high hardness of this material pairing offers good resistance against abrasive particles.

Secondary seal material: EPDM (ethylene-propylene rubber)

EPDM has excellent resistance to hot water. EPDM is not suitable for mineral oils.

A circulation of liquid through the duct of the air vent screw ensures lubrication and cooling of the shaft seal.

The flanges have tappings for mounting of pressure gauges.

The motor stool forms connection between the pump housing and the motor, and is equipped with a manual air vent screw for venting of the pump housing and the shaft seal chamber. The sealing between motor stool and pump housing is an O-ring.

The central part of the motor stool is provided with guards for protection against the shaft and coupling. The pump shaft is fastened directly on the motor shaft with key and set screws.

Motor

The motor is a totally enclosed, fan-cooled motor with principal dimensions to IEC and DIN standards. Electrical tolerances comply with IEC 60034.

The motor is flange-mounted with free-hole flange (FF).

Motor-mounting designation in accordance with IEC 60034-7: IM B 5, IM V 1 (Code I) / IM 3001, IM 3011 (Code II).

The motor efficiency is classified as IE5 in accordance with IEC 60034-30-2.

The motor requires no external motor protection. The motor control unit incorporates protection against slow- and quick-rising temperatures, e.g. constant overload and stalled conditions.

The terminal box holds terminals for these connections:

- one dedicated digital input
- two analog inputs, 0(4)-20 mA, 0-5 V, 0-10 V, 0.5 3.5 V; the factory-fitted pressure sensor is connected to one of these inputs
- 5 V voltage supply to potentiometer and sensor
- one configurable digital input or open-collector output
- · Grundfos Digital Sensor input and output
- 24 V voltage supply for sensors
- · two signal relay outputs (potential-free contacts)
- GENIbus connection
- interface for Grundfos CIM fieldbus module.

Further product details

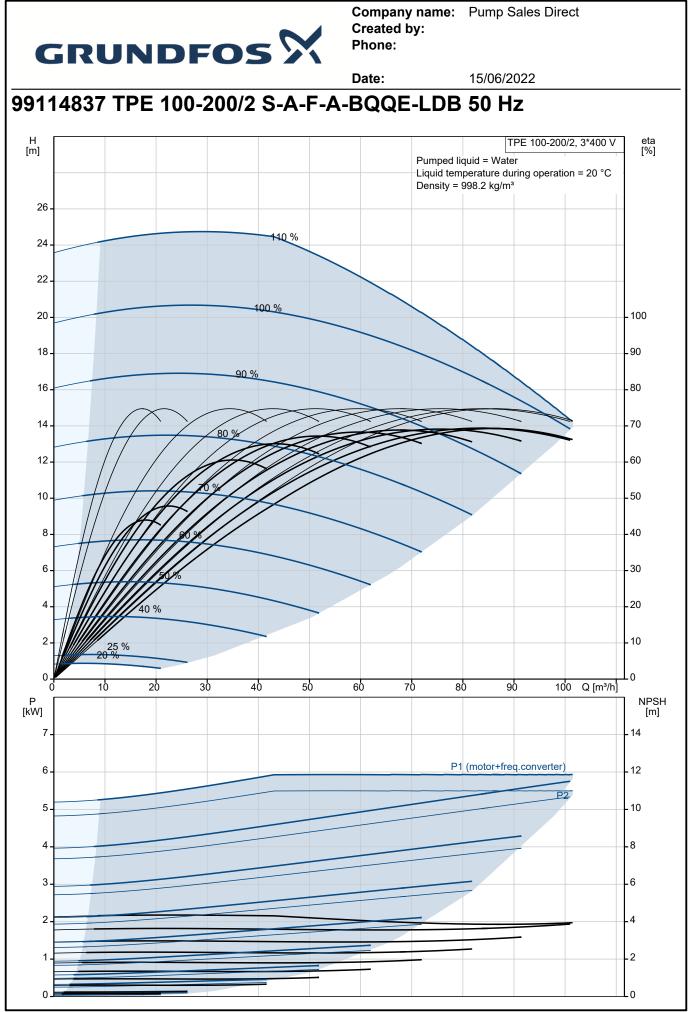

Cast-iron parts have an epoxy-based coating made in a cathodic electro-deposition (CED) process. CED is a high-quality dip-painting process where an electrical field around the products ensures deposition of paint particles as a thin, well-controlled layer on the surface.
