Description		
1: Pump housing		
2: Impeller		
3: Stub shaft		
4: Pump head/motor stool		
5: Wear rings		
The twin-head pump is designed with two parallel pow is opened by the flow of the pumped liquid and preven	wer-heads. A no nts backflow of	n-return flap valve in the common discharge port iquid into the idle pump head.
The pump housing is provided with a replaceable bras outlet side of the impeller to the inlet side.	ss neck ring to r	educe the amount of liquid running from the
The impeller is secured to the shaft with a nut.		
The pump is fitted with an unbalanced rubber bellows bellows. Due to the bellows, the seal does not wear th on the shaft.	s seal with torqu he shaft, and the	e transmission across the spring and around the e axial movement is not prevented by deposits
Seal faces:		
Rotating seal ring material: silicon carbide (SiC	C)	
Stationary seat material: silicon carbide (SiC)	- /	
This material pairing is used where higher corrosion r offers good resistance against abrasive particles.	esistance is req	uired. The high hardness of this material pairing
Secondary seal material: EPDM (ethylene-propylene	rubber)	
EPDM has excellent resistance to hot water. EPDM is		mineral oils.
A circulation of liquid through the duct of the air vent s	screw ensures l	ubrication and cooling of the shaft seal.
The pump housing has four Rp 1/8 tappings for moun housing if the twin-head pump is to be installed in a h	nting of automati orizontal pipelin	c air vents. Fit an air vent to the upper pump e with horizontal pump shaft.
<b>00°</b>		
The flanges have tappings for mounting of pressure g	auges.	
The motor stool forms connection between the pump	housing and the	e motor, and is equipped with a manual air vent
screw for venting of the pump housing and the shaft s housing is an O-ring.	seal chamber. T	he sealing between motor stool and pump
The central part of the motor stool is provided with gu shaft is fastened directly on the motor shaft with key a		on against the shaft and coupling. The pump

#### Motor

Qty.

The motor is a totally enclosed, fan-cooled motor with principal dimensions to IEC and DIN standards. Electrical tolerances comply with IEC 60034.

The motor is flange-mounted with free-hole flange (FF). Motor-mounting designation in accordance with IEC 60034-7: IM B 5, IM V 1 (Code I) / IM 3001, IM 3011 (Code II).

The motor efficiency is classified as IE5 in accordance with IEC 60034-30-2.

The motor requires no external motor protection. The motor control unit incorporates protection against slow- and quick-rising temperatures, e.g. constant overload and stalled conditions.

The terminal box holds terminals for these connections:

- one dedicated digital input
- two analog inputs, 0(4)-20 mA, 0-5 V, 0-10 V, 0.5 3.5 V; the factory-fitted pressure sensor is connected to one of these inputs
- 5 V voltage supply to potentiometer and sensor
- one configurable digital input or open-collector output
- Grundfos Digital Sensor input and output
- 24 V voltage supply for sensors
- two signal relay outputs (potential-free contacts)
- the two power heads communicate via wireless GENIair or wired GENI connection
- interface for Grundfos CIM fieldbus module.

## Qty. Description Further product details

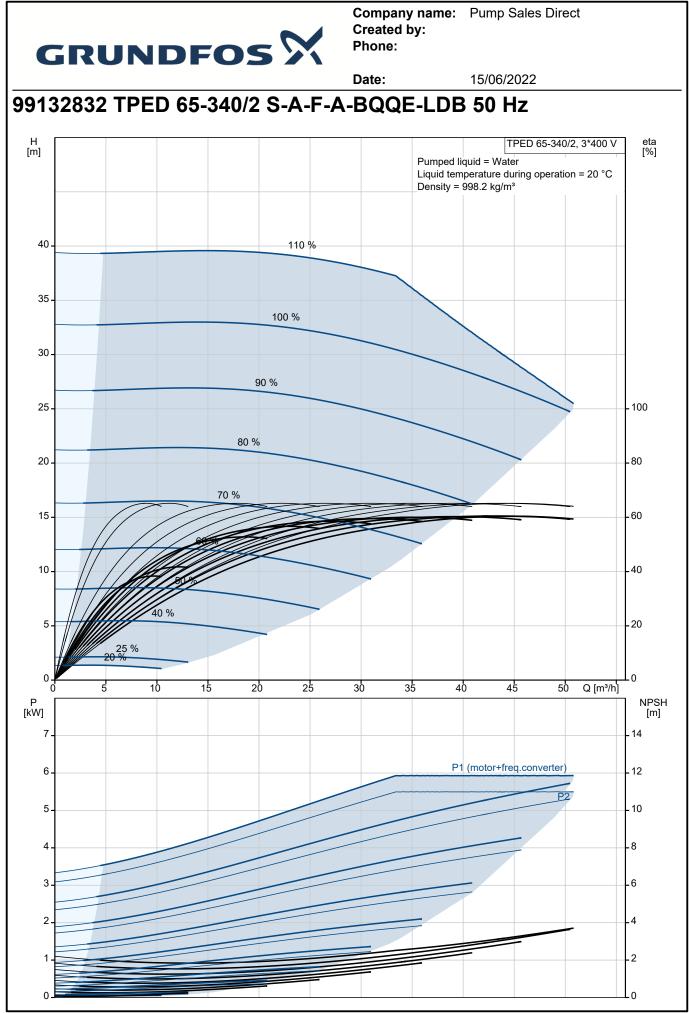

Cast-iron parts have an epoxy-based coating made in a cathodic electro-deposition (CED) process. CED is a high-quality dip-painting process where an electrical field around the products ensures deposition of paint particles as a thin, well-controlled layer on the surface.
